

Conceptboard On-Premises Delivers the Ease of Cloud Collaboration to Highly Regulated Industries and Security Conscious Enterprises

The online visual collaboration platform for teams and enterprises is now available as a self-hosted solution that runs on your local network

STUTT GART, GERMANY (May 2015) -[Conceptboard](#), the visual collaboration platform for teams, today launched Conceptboard On-Premises, a new secure solution for companies and enterprises in highly regulated industries.

“Mid-market to larger enterprises in the EU and industries such as healthcare, finance, and automotive want the benefits of cloud collaboration applications, but often, they are not able to take advantage of them. This is due to security and privacy requirements stemming from local data protection laws, internal data directives and policies, or compliance regulations such as HIPAA, or Sarbanes-Oxley,” says Conceptboard CEO Daniel Bohn. “With the new Conceptboard On-Premises, we’re bringing the benefits of online collaboration behind the company firewall, and helping organisations reap the productivity benefits of web based collaboration tools. Your users get a simple, intuitive web interface for collaboration. Your IT department gets data security and control.”

Conceptboard On-Premises offers the same collaboration tools as the web-based application, in-house and behind the firewall:

- Flexible workspaces that centralise documents and discussions, while reduce email overload.
- Intuitive whiteboard tools that allow for faster iteration with feedback & documents “in-context”.
- Secure real-time and remote collaboration: share and start a live session, and keep everyone else in the loop with @mentions, alerts, and notifications.
- Project management tools with projects, tasks assignments, activity feeds, and progress tracking.

Conceptboard On-Premises is easy to deploy on any industry standard hypervisors from VMware, Microsoft, Oracle, Red Hat, IBM, or Citrix . It comes ready with a Single-Sign-On (SSO) SAML integration for easy user provisioning using common directory systems, such as Microsoft ADFS and OneLogin. This allows organisations to leverage existing infrastructure and security standards, while retaining full control over important aspects, such as data storage, user access controls, and system monitoring.

For more information on Conceptboard On-Premises and a free trial please visit conceptboard.com/onpremises or send an email to enterprise@conceptboard.com.

About Conceptboard, GmbH

[Conceptboard](#) is a collaboration app for distributed and cross-functional teams working visually on projects in product development, product design, and business and service design. With an emphasis on images and visual communication, Conceptboard is where teams come together to innovate, discuss, and present their products and services.
